APBMW BIAMP 1

BMW - MINI OEM REPLACEMENT

This Plug & Play harness provides the ability to bi-amplify the front speakers of BMW and MINI vehicles that are not provided with an OEM amplifier. The APBMW BIAMP 1 is installed under the vehicle seat and is connected to the subwoofers. The "T" connection type allows the user to separately route the signal to the front Mid-Hi housed in the car door and to the underseat sub, without the need to cut the OEM cables. The cable is 450 cm long to reach the vehicle boot, where the Audison bit amplifier is installed. The package contains a pair of cables, one for the left channel and one for the right channel.

FEATURES

Made for BMW and Mini

This cable doesn't retrieve the OEM source front and rear stereo audio signal, to do that it can be used together with Audison Extension IN/OUT cable.

Sold in pairs

The package contains a pair of cables, one for the left channel and one for the right channel.

Plug & Play

This Plug & Play harness provides the ability to bi-amplify the front speakers of BMW and MINI vehicles that are not provided with an OEM amplifier.

T connection

The "T" connection type allows the user to separately route the signal to the front Mid-Hi housed in the car door and to the underseat sub, without the need to cut the OEM cables.

450 cm long

The cable is 450 cm long to reach the vehicle boot, where the Audison bit amplifier is installed.
